

# FARE<sup>SALES</sup> GO ST|21

## COMPACT DESIGN MEETS HIGH FUNCTIONALITY

### Low space requirements

Due to its very compact dimensions and the small footprint FareGo Sales ST|21 can be operated easily in nearly every location.

### Optimised for cashless ticketing

FareGo Sales ST|21 is perfectly suitable for selling electronic tickets as well as collecting pre-confirmed tickets (e. g. from web portals) at bus stops or metro stations.

### Browser-based service interface

The new browser-based service interface provides a time-saving and intuitive operation. Remote access through browser-capable devices is possible for various service tasks without the need to open the ticket vending machine.

## Appealing design

With its slim stainless steel housing and the elegantly integrated illumination top FareGo Sales ST|21 has a particularly modern appearance.

## Long-life LED lighting

The bright and energy-efficient LED illumination does not only provide ease of use at dark. Furthermore it subtly underlines the modern appearance of FareGo Sales ST|21.

## 15" display

The inwardly tilted 15" display with LED backlight is durable against direct solar radiation and cold weather conditions. It can easily be operated even while wearing gloves.

## Extensive payment and ticketing functionalities

Payment options include coins and banknotes as well as contact and contactless Debit-/Credit cards. FareGo Sales ST|21 processes smart cards, barcode tickets and issues magnetic cards.

## User-friendly and accessible

The four-corner menu including voice output via speaker or headphone provides a simple and accessible operation.

## Service App

All service functions can be performed with messages in plain text. In some cases opening the machine for service works is time-consuming and now unnecessary as this can be done remotely via a mobile device, for example using a tablet.
